

1310um single-mode optical fiber

Overview

Coherent 1310/1550 nm high-performance select cutoff single-mode fibers are optimized for use by component manufacturers in the telecommunications wavelengths. Designed for small form factor components, these fibers offer exceptional uniformity and tight bend radius specifications. A 1310nm single mode fiber optical transceiver is one of the most widely used optical transceivers in modern fiber-optic networks, especially for short-to-medium distance transmission over single-mode fiber. Operating at the 1310nm wavelength, this type of optical module strikes a practical balance. Draka Single-Mode Fiber (SMF) provides optimum performance in both the 1310 nm and 1550 nm wavelength operation ranges (including the 1565 - 1625 nm L-band), with a low dispersion in the 1310 nm window. As part of the O-band (1260-1360 nm), it balances low dispersion, stable performance, and cost efficiency. This makes it widely adopted in data centers, enterprise backbones, and metro access. In this paper, we present an optical fiber that is single-mode at 1310 nm window and few-mode at 850 nm window with high bandwidth.
