

90-degree bend in network cabinet

Overview

Excessive bending, stretches or compresses twisted pairs, raises attenuation by 1-3 decibels (dB) and can make a 10 GbE (10 Gigabit Ethernet that supports 10 gigabits per second) link fail. Distorted twists increase near-end crosstalk (NEXT), especially at frequencies above 500 MHz. A practical guide for understanding Ethernet cable bend radius, why sharp bends damage network performance, and how installers and buyers can avoid cabling failures in structured cabling projects. 65 CM sheathing, except for one flat cable. Thanks Ethernet is usually fairly forgiving of most bends, unless it's super-kinked, especially if it's a static run and isn't moving. Search for Cat6 minimum bend radius on Google. Will a long cat6 cable run be able to handle a few 90 degree bends?
