

Broadband wiring in the distribution box

Overview

Run four Cat6 cables (with RJ45 jack points) from the home distribution box to the main entertainment hub and at least two Cat6 cables to all other outlet positions. Leave at least 300mm of cable slack at each outlet once the cable is terminated. It takes the incoming power and safely distributes it to different circuits throughout your building. You can install this yourself, but it needs to be managed carefully. There needs. Our handbooks show you how to build fibre or copper infrastructure at your new residential or commercial development, and how to install Openreach equipment. They cover what you and your sub-contractors will need to do to reach the quality we expect - from building the ducts and joint boxes, to the. In this video, we'll walk you through the process of wiring a home distribution box with a detailed connection diagram. Minimum specification of Cat6 cables.
