

Cable tray and hanger grounding

Overview

This article provides a comprehensive framework that governs various aspects of cable tray installations, including the types of cables that are deemed acceptable for use, requirements for grounding and bonding, and stipulations regarding tray fill capacity. Cable tray may be used as the Equipment Grounding Conductor (EGC) in any installation where qualified persons will service the installed cable tray system. It instructs us on how to construct them, where to locate them, and how to stuff them with wires without using too much. These regulations ensure that the metal or plastic frames that contain the wires are robust enough to ensure. Cable tray systems have become an essential component in the infrastructure of modern commercial buildings, smart offices, data centers, and various industrial facilities. For SI units: one square inch = 645 square millimeters.
