

Fiber Optic Cable Maintenance During Rainy Season

Overview

This article explains why fiber connectors fail in rain, how moisture affects FTTH performance, and what practical steps operators can take to prevent rain-induced failures, from both engineering and OPEX management perspectives. Rain itself is not the real problem. Fiber optic networks are essential for high-speed communication and data transmission, but they can also be vulnerable to extreme weather conditions such as storms, floods, heat waves, and cold snaps. Without it, you might face network interruptions and extensive repair or replacement costs. On a residential. For ISPs and FTTH contractors deploying networks across Africa, the Middle East, Southeast Asia, and Latin America, rain-related connector failure is one of the most common and most expensive outdoor FTTH issues. These cables are typically installed underground or through aerial means, such as on utility poles. The installation process involves several steps, including: Planning and design: This involves.
