

Fiber Optic Cable Tension Testing

Overview

IEC 60794-1-311:2024 describes test procedures to be used in establishing uniform requirements of optical fibre cable elements for the mechanical property – tensile strength and elongation at break. Tensile strength measures the maximum pulling force a fiber optic cable can withstand before breaking. It provides closed-loop control for force and displacement, ensuring accurate and repeatable results. As the components like fiber, connectors, splices, LED or laser sources, detectors and receivers are being developed, testing confirms their performance specifications and helps. Optical Fiber Cable Tensile Tester – Indoor & Outdoor Combo | Model TT-OFCT-IDOD is built in accordance with IEC 60794-1-21 E1 standards for tensile testing of both indoor and outdoor optical fiber cables. This method evaluates cable performance under specific tension levels, focusing on changes in.
