

Fiber optic connectors must be used before connection

Overview

Inspect and clean connectors before any connection is made. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. There are three main principles that needs to be taken in consideration for an efficient optical connection: a perfect core alignment, perfect physical contact and dirt-free connectors. 1) The other portion of a good physical contact between the connectors ferrules is the absence of any type of. Connectors are key components that interconnect the entire network elements, which is why maintaining them in good condition is essential to ensure that all the equipment operates to their maximum performance—to avoid catastrophic network failure.
