

# Fireproof cable trays are not galvanized

## Overview

Indoor: Painted steel or galvanized trays. Selecting the appropriate fire protection system for fire resistant cable trays in high-stakes projects—especially in regions like the Middle East with extreme climates and frequent potential for explosive atmospheres—is a critical decision impacting safety, compliance, and lifecycle cost. Corrosive/High Humidity: . ucts; however, as an alternative DIN 4102-12 can be used. This is a test for electric cable systems that are required to maintain circuit integrity, so is therefore written around and is dependent on the cables themselves, but containmen of 90 minutes (the maximum time covered by DIN 4102-12). There are several material choices available for cable trays in today's market, the most popular choices are steel (HDG/SS), aluminum, PVC and FRP/GRP. However, there is not a common consensus on how these material types compare to each other in fire conditions. So, we put them to test! Take a look. Cablofil cable tray is the preferred choice for the cable containment of low and high voltage electric cables where fire resistance is crucial - this includes cable basket tray systems for Prysmian FP (FP400 and FP600) and Draka Firetuf type cables.
