

# Fully Modular Data Center

## Overview

A modular data center is a prefabricated, self-contained unit — often housed in a customized enclosure that resembles a shipping container — that integrates all the necessary power, cooling and IT infrastructure in order to localize computing power closer to the origin of data. A modular data center is a prefabricated, self-contained unit — often housed in a customized enclosure that resembles a shipping container — that integrates all the necessary power, cooling and IT infrastructure in order to localize computing power closer to the origin of data. Modular data centers deliver adaptable, high-performance designs that meet complex infrastructure needs across diverse locations and environments. Modular solutions provide quick-to-deploy compute capacity even in remote areas. Modular data centers speed deployment by reducing onsite work. Rapidly expand your data center capacity, efficiency and agility with Vertiv's prefabricated modular data center solutions. A viable solution for IT anytime, anywhere. As demand. For public cloud and large colo DCs, IDCs, and medium- and large-sized DCs of carriers, enterprises, governments, and financial institutions For small- and medium-sized DCs of governments, enterprises, and carriers, and small- and medium-sized IDCs For small equipment rooms in government.
