

# How to connect a switch to a firewall

## Overview

Connect a port on the SonicWall Switch to an available port on the firewall. Use a CAT5e or CAT6 cable (that is, RJ45 to RJ45) when connecting to an RJ45 port, or use a fiber optic cable when connecting to a supported SFP interface. A firewall is a type of network security device component that is used to keep track of incoming and outgoing network traffic and then make decisions regarding the traffic i., which traffic to allow or deny in accordance with a set of security rules. In order for the firewall to sense the presence of the Switch, the firewall must be setup to add Switches with Zero-Touch. To prepare the firewall Navigate to HOME | Dashboard. I would like a help about a configuration, so I have a switch layer 6500 series connected to a firewall, the port configuration between them is layer 2, in another words I do not configure an IP address in the Cisco switch port to conected it in the firewall, but when a apply a policy on firewall. We have added a second firewall (a SonicWALL NSA) and a switch. There are three other VLAN's set up on the switch. Layer 3 switches can work at Layer 2 and Layer 3 and be deployed at the access layer or aggregation layer as user gateways. For. This document provides configuration examples for connecting a switch and firewall for external network access.
