

# How to cut the tail fiber

## Overview

Use the fiber stripper to cut off 2" (50mm) of the cable jacket and pull off the cut piece. Be gentle so you do not damage the fiber. In this week's video, Ben Hamlitsch shows you how to cut, strip, clean, and cleave your fiber optic cable! He also shares some best practices to follow and additional details you'll want to know along the way! Interested in learning more?

Check out our detailed blog that covers this pro. 1 Improper use of a respooler (Figure 1) can cause damage to a cable jacket or result in wavy fiber in tight buffered cables due to cable crossovers or excessive tensile loading. Even a small % of cut fibers will significantly reduce finished-product pull strength. These strength members are also. Field-terminating connectors is a meticulous, high-pressure process where even a tiny mistake can force you to cut the fiber and start all over again.
