

Internal grounding of network cabinet

Overview

Each cabinet must be equipped with an earthing bar or a ground reference metal sheet. All shielded cables and external protection circuits must be connected to this point. Plastic. This paper will discuss the design requirements and common installation practices for the implementation of a good grounding system that would follow these guidelines. The traditional data center was. Bonding (or grounding) is a system of protective measures, which is implemented to prevent electric shocks when touching metal parts of energy-powered equipment. Grounding strip shall comply with EIA universal mounting hole spacing and mount to standard racks and cabinets. All components shall be bonded to the rails with paint. EMC is the ability of electronic equipment to operate without problems within an electromagnetic environment. EMC standards define both the emission and immunity levels.
