

Jamaica-branded 400G optical switch

Overview

These components support data rates of up to 400 Gigabits per second (Gbps), providing the bandwidth necessary to handle today's data-intensive applications. JTOPTICS® 400G transceivers are engineered for next-generation data center environments requiring massive bandwidth and. JCO400 Coherent Pluggable Transceivers help operators achieve their capital, operational, and user experience goals. As a core component of the Juniper Converged Optical Routing Architecture (CORA), this innovative series is essential to the transformation strategies of both service providers and. What are the benefits of moving to 400G technology?

Arista's 400G platforms allow data centers and high-performance computing environments to address growing needs for higher bandwidth at lower cost and power per gigabit. A 400G optical transceiver is a hot-swappable module that sits in a switch, router, or NIC and converts high-speed electrical signals to light (and back again) so traffic can travel over fibre. The most common 400G form factor is QSFP-DD (Quad Small Form-Factor Pluggable, Double Density).
