

LPO optical amplifier for field operations

Overview

LPO, or Linear Drive Pluggable Optics, simplifies optical modules by removing the DSP entirely, relying on host ASICs for analog signal processing. It retains the traditional pluggable form factor, ensuring field serviceability and compatibility with existing data center. Linear Pluggable Optics (LPO) are a new optical transceiver technology. Instead, the signal regeneration and signal equalization that are typically performed by the DSP are split between the switch ASIC, the driver IC and the TIA. Some of the key proponents of LPO in the industry are Macom, Semtech and Maxlinear. The main advantages. New Castle, Delaware – FS, a trusted provider of ICT products and solutions, has launched its cutting-edge 800G Linear Pluggable Optics (LPO) module. Designed for AI/ML applications, this advanced 800G DR8 OSFP finned top LPO module enables high-speed data transmission with ultra-low power. Copyright 2023, Coherent.
