

# Micro-module computer room partition

## Overview

Abbreviated as micro-module, it is a small rack cluster formed by a certain number of two rows of back-to-back or face-to-face IT racks, uninterruptible power supply, near-end cooling equipment and so on through closed aisle. By sealing the cold or hot aisle between the two IT racks, a physical. Huawei FusionModule2000 is a new generation smart modular data center solution, which dedicated to providing customers with simple, efficient, and reliable data center solutions. It uses racks as the datacenter carrier and fully integrates all sub-systems including UPSs, cooling, power distribution, lightning protection, fire control (optional), wiring, airflow management, intelligent. A micromodule is a complete data center that can stand alone on computing or storage resources. Adoption of modular components and unified interface standards to achieve rapid, flexible deployment and later expansion of data centers, greatly reduce the construction cost, while shortening the. A Micro Module refers to an independent operating unit that takes several functional cabinets such as IT cabinets, power supply units, and air conditioning terminal units as the basic unit, and includes functions such as networking, cabling, monitoring, and fire protection. The unit will be integrated and tested before it leaves the STULZ factory and allows you to simply plug and play.
