Overview

The ANSI working group X3T11 defines the Fibre Channel specifications. The Fibre Channel Association has a complete list of the ANSI X3T11 Fibre Channel Standards and draft Standards You can find those via the FCA Fibre Channel Technology pages (click on Standards at the top of that. Fibre Channel (FC) is a high-speed data transfer protocol providing in-order, lossless delivery of raw block data. Fibre Channel is primarily used to connect computer data storage to servers in storage area networks (SAN) in commercial data centers. Fibre Channel networks form a. The Proven Standard for High-Performance, Reliable Data Storage and Delivery Fibre Channel remains the preferred solution for Data Centers seeking reliable, high-speed, and cost-effective data storage and delivery. With development initiated in 1988, ANSI standard approval granted in 1994, and. at any time. This card is available as a factory-installed option for the Multiservices Platform Series.
