

OLT optical crossover splitter

Overview

Optical splitter is a component of PON network. Its function is to distribute downstream data and concentrate upstream data. In the backbone of modern Fiber-to-the-Home (FTTH) networks, optical splitters serve as the unsung heroes that enable cost-efficient connectivity for millions of subscribers. When you stream a 4K video, join a remote meeting, or play an online game on a gigabit fiber connection, an OLT. An Optical Distribution Network (ODN) is an important component within fiber access networks (FTTx). The ODN uses passive optical elements. Active Optical Networks (AON) and Passive Optical Networks (PON) make FTTH broadband connections possible. To date, most FTTH deployments in planning and deployment have used PON to save on fiber costs. Fiber-to-the-home. Siemon Enterprise Passive Optical Network (PON) Fiber Cabling Solution improves the modularity, flexibility and management of PONs that are emerging as an alternative to switched networks in a variety of enterprise LAN environments.
