

Overvoltage suppression cabinet relay protection

Overview

To protect the relay from inductive fly back energy, a diode is placed across the load. Since their inception, solid state relays (SSRs) have relied on overvoltage suppression devices such as metal oxide varistors (MOVs) to protect their outputs from voltage extremes such as overvoltage transients. Any voltage that exceeds the SSR's DC or peak AC load voltage, as specified in the. Diodes, TVS, diode arrays, relays, surge protectors, SIDACtor® protection thyristors, and varistors provide overvoltage protection to PCBs, LED arrays, and other delicate electronics. The devices also help save power by switching current efficiently and limiting current leakage. Rely on Littelfuse. ily and part of its 610 product series. The plug-in design of the 610 series protection relays facilitates the commissioning of the switchgear and enables fast and safe insertio. Cabinets and devices of relay protection and automation (RPA) manufactured by Radiy are a modern solution for control, automation, protection, monitoring and signaling at power facilities.
