

# Quick-closing device for distribution boxes

## Overview

Quick-closing valves are the safety device between a potentially dangerous medium and your system. If a defined pressure is exceeded or not reached, these shut-off valves close in less than a second and interrupt the further supply of the medium. With automatic quick-closing valves from Albrecht-Automatik, you can reliably protect your system from dangerous operating conditions, protect your workforce from critical situations and avoid expensive damage. We design and manufacture certified safety quick-closing valves and stations at our. Our flexible distribution boxes enable reliable, decentralized signal transmission and power transmission up to protection class IP67 - wherever passive distribution boxes are required. The low height also allows the usage in narrow spaces. Our systems are composed by valves and control panels. The valves are installed in potential flammable liquid lines (fuel, oils, etc) or at the outlet of tanks, whereas the control. In addition to the well proven quick closing safety shut-off valves in standard design with actuator controlled by means of instrument air, the self-media operated quick closing valves are used in any application area for which the quick and safe shut-off of gaseous media as well as fuels is.
