

SD-WAN device 400G

Overview

Scale with high-density 400G routers for long-term growth and segment routing for SLA-based services. Simplify your access network and converge services with these secure and. The Juniper SSR400 is an AI-native Session Smart Router that consolidates routing, SD-WAN, and next-generation firewall capabilities into a single, compact, fanless device. It is designed to support a wide range of deployment needs—from small branch offices to large enterprise hubs—with detailed product specifications, licensing details, and deployment. VeloCloud SD-WAN™, by Arista a fundamental component of SASE, offers converged cloud networking and security services to achieve flexibility, agility, and scale for enterprises of all sizes. VeloCloud SD-WAN is built on software-defined networking principles to address end-to-end automation. An SD-WAN appliance is a hardware or virtual device that enables the deployment and management of SD-WAN networks. It continuously monitors multiple network connections to dynamically route traffic over the most efficient path. SD-WAN appliances provide built-in security features like firewalls. The core functionalities of Fortinet's SD-WAN solution are built into the FortiGate. Whether the environment contains one FortiGate, or one hundred, you can use SD-WAN by enabling it on the individual FortiGates. At a basic level, SD-WAN can be deployed on a single device in a single site. Only Juniper can help you unleash the full potential of Wi-Fi 7 with our AI-Native platform for innovation.
