

Service life of aerial optical cables

Overview

While routers, switches, and transceivers often have upgrade cycles of 3 to 5 years, properly installed and maintained fiber cabling systems can last 15 years or more — spanning multiple hardware generations. The first aerial fiber optic cables such as Optical Ground Wire (OPGW), All-Dielectric Self Supporting (ADSS) and Helically Applied Fiber Optic cables were installed by power utilities more than 35 years ago. So, how often. Wireless, DOCSIS, and DSL technologies have required continuous outdoor infrastructure upgrades to increase speeds and capacity, and carriers have recognized the value of fiber as these incremental approaches typically include more optical fiber deeper into the network toward the subscriber. But ask any veteran network engineer, and they will tell you a different story. We often hear that fiber optic cable lasts "a lifetime. " The reality is more nuanced: silica The optical core is virtually chemically indestructible, but the sheaths, coatings, and.
