

The hole spacing in the distribution box is too large

Overview

When the hole for a junction box is too large, use a metal cover plate designed to cover excess space. These plates have screw holes aligning with the box's mounting points. 3 mm are classified as small holes. Small holes can have several negative impacts on production: Difficulty in Plating: Smaller holes are more likely to result in unplated or poorly plated holes. Pick up a few of them as they are super handy for remodel work. Proper hole spacing affects everything from mechanical strength to electrical performance, yet it remains one of the most commonly overlooked aspects. General half-hole design: The hole size and hole spacing should be above 0. Therefore, pay attention to this detail when designing the half-hole, otherwise, it will cause unnecessary loss of the. The main issue I'm running into is that the previous holes for the boxes are ever so slightly too large.
