The switch s optical port indicator light remains constantly on yellow

Overview

The port is disabled (by diagnostics or by portDisable command). Check the management interface and the error log for details on the cause of the failure. This guide explains what each light means, how to. The switch consists of multiple LEDs to monitor switch activity and performance. You can also monitor the status of the fan tray assembly and the power supplies. However, on my TL-SG108e which is set up to use 802. 1q VLAN tags, all the active ports flash simultaneously so I can't see which ones are actually transmitting/receiving. These LEDs are located above each pair of Fibre Channel ports. The LED colors for the switch and their corresponding status indications are as follows ; To Select or change a mode, press the mode button until the desired mode. What exactly do the following colours on the port LED's mean: no light. Matt I have Cisco 3500 xl i will face one issue.
