

There is no router inside the fiber optic box

Overview

Connect the fiber terminal to ONT. While the ONT converts fiber signals into electrical signals, the Wi-Fi gateway (router/modem) turns those electrical signals into wireless signals that your devices can pick up. The technician powers, tests, and. What's in that outside box is likely just a ONT (optical network translator) and not what you think of as a modem. You likely have your actual router/WiFi access point inside. It's no more of a security threat to have the ONT outside than. They have put a small box outside each door for the full fibre. My telephone socket and router are right at the other end of my property from the front door and it is quite a run from the front door to the router and phone location. Yet I can't detect any WiFi network on my phone that seems to. I need information on what settings I need to configure on my router to access Internet via fiber optic modem. Unfortunately, not much information here to go on.
