

# What is a PC-type distribution box model

## Overview

This range of Distribution Boxes are manufactured from Polycarbonates (PC) or ASA. These boxes have an option for spring loaded connections or busbar connections and are used to take multiple connections from a single enclosure – these connections can be used for distribution to. A Distribution Box, commonly known as a DB Box, serves as the central point for safely distributing electrical power from a main supply to multiple downstream circuits. It houses protective devices such as circuit breakers or fuses, ensuring both equipment protection and user safety. Actual units use PNP status indicator, NPN status indicator, or neither. Dimensions are shown in mm (in. 81 ft)]. The distribution box (DB box) helps safely and efficiently distribute electrical power. The raw material is processed – in slab form – at pressures of up to 400 t and at a temperature of 180°C. This triggers a vulcanization process which lends the distributor its final form. A Class CB ATS is essentially an assembly consisting of two circuit breakers (usually MCCBs—Molded Case Circuit Breakers) equipped with a mechanical interlock and an electrical operating mechanism (motorized drive). Think of them as traffic controllers for power—they direct energy where it needs to go while protecting against overloads or.
