

What is the span of a fiberglass cable tray

Overview

Cable tray span refers to the distance between two support points that hold a cable tray securely in place. This includes both the cable load and environmental loads like wind, snow, ice (See Cable Tray Strength and Load Capacity section in this guide). NEMA FG-1 establishes these spans based on comprehensive testing, simulating industrial applications and various installation conditions to ensure the. Fiberglass cable tray provides the answer to many adverse environments. Life cycle costs, long span capability and easy field modification make Cope-Glas™ an ideal choice for industrial, chemical, and petrochemical facilities. Cope-GLAS cable tray systems are available in flange-out and flange-in. An example of this configuration is where cable trays are installed across several supports to form a number of spans. The continuous beam possesses traits of both the simple and fixed beams. When equal loads are applied to all spans simultaneously, the counterbalancing effect of the loads on both. For International Standards, the manufacturer shall declare the tray system Safe Working Load (SWL) per the International Electrotechnical Commission (IEC) 61537 and publish in the form of a table or diagram.
