

# What to do if there are marks on the fiber optic cable splice

## Overview

You can use a visual fault locator (VFL), which is a device that emits a red laser light through the fiber, to trace the cable and spot any breaks, cracks, or bends. While a cut or damaged fiber optic cable can temporarily take your network down, it is possible to quickly fix the cable with the right tools. Selected by the community from 29 contributions. This guide walks you through everything — from field inspection to professional testing standards — used by telecom and. This document presents a troubleshooting guide for fiber optic cables once deployed and in regular use. Maintenance personnel can refer to this document for step-by-step troubleshooting when dealing with faults arising from the following. One of the most frequent problems in fiber optic networks is signal loss —the gradual reduction of optical power as light travels through the cable. Causes include excessive bending, dirty connectors, or poor splicing.
