

# Wiring method for surface-mounted electrical boxes

## Overview

At fixture and outlet locations, install surface-mount conduit boxes. Run wires from the boxes to the wireway, leaving 6 to 8 inches of extra wire at boxes to make connections. Use splice connectors to join wires together at splices and junctions. Installation is quick, clean, and non-invasive, making it perfect for concrete walls, rental spaces, or temporary setups. Start by drawing a detailed diagram of your intended installation, especially where the new fixtures and outlets will go. It is important to realize that surface wiring is only an acceptable practice indoors, and poses many safety. Surface-mounted wiring and conduit, also known as raceway systems, provide a practical alternative to running electrical cables inside walls and ceilings. This method involves installing a protective channel, or conduit, directly onto the surface of a structure to house and shield the electrical. If you're dragging extension cords across your basement or garage to power shop lights and tools, consider extending an existing circuit instead by installing surface-mounted wiring and conduit. Choose a power source like a wall.
